

Math in the Real World

Zifei Zhao

The relationship between music and math is often overlooked. Just by observing, there are patterns throughout the piano of the black and white keys. Once the music notes are comprehended, each note adds onto a musical equation to create a song.

The lights on the Christmas tree are reminiscent of scatter plots. Perhaps the line of best fit would be the tree trunk.

The full moon is a classic example of circles in real life. The fireworks are shot at a certain angle and height to show off its sparkle to the audience but also to keep everyone safe.

The veins of plants are interconnected, creating intricate patterns that support life.
